

IF YOU BACKFILL IT, THEY WILL COME

SOFT SHELL CLAMS CAN NOT RE-PLANT THEMSELVES. PROPERLY RE-PLANTING YOUR SEED, SIPHON UP, AND COVERING IT WITH SAND ENSURES IT'S SAFETY.

FAILURE TO RE-PLANT SEED RESULTS IN PREDATION AND EXPOSURE TO THE ELEMENTS. FAILURE TO BACKFILL HOLES RESULTS IN DEGRADED HABITAT, MEANING NO FUTURE SEED SETS IN THAT AREA.

PROTECT YOUR FUTURE FISHERY
ALL DIG SITES SHALL BE BACKFILLED WHEN DRY DIGGING SHELLFISH.

\$50 fine for not backfilling all holes when dry digging shellfish
